

VIDANT HEALTH™

# PI-Initiated Program

The Center for Research and Grants launched the PI-Initiated Program in March, 2017 to create a centralized support system for all researchers that starts from idea generation to dissemination.

CRG aims to make the research process painless and seamless for not only clinical staff, but for all Vidant Health employees in order to facilitate excellence through the research life cycle.

1

## STEP ONE Consultation

Meet with CRG to discuss research ideas and connect with potential collaborators. Complete CITI Training and ePIRATE registration.

2

## STEP TWO Proposal Development

Determine the research question, design and methodology. CRG assists with writing the proposal and completing the IRB application.

3

## STEP THREE Implementation

Begin research after IRB approval. CRG helps with data management, IRB continuing reviews, data analysis and statistics.

4

## STEP FOUR Dissemination

Present and share your results with the research community! CRG provides avenues for dissemination and assists with scientific writing.
